

VALAURUM

THE AURUM®

Legal Tender, Bullion, Commemorative & Reproduction 24k Gold Notes

INTRODUCING THE AURUM®

The Aurum, our flagship product, brings gold investment into the 21st century. Each Aurum bill contains a precise, micro-layer of 24-karat gold protected by additional layers of durable polymer. This technology is used to create a way to physically own gold that is flexible, durable, and easy to store.

The Aurum provides a truly unique opportunity to showcase custom art and designs on pure 24-karat gold. The high sheen of gold is visible from edge-to-edge throughout each bill. The high-quality precious metal provides a warm, lustrous backdrop against which our vibrant inks, fine printing, and exquisite artwork literally shine. Our design and production teams bring years of experience working with this unique material.

Each Aurum is created with industry-leading security features, cutting-edge technology, and proprietary manufacturing processes to make gold ownership secure, trustworthy, and collectible. Valaurum holds the worldwide exclusive license for this innovative proprietary technology, protected by US and international patents.

Valaurum offers a variety of Aurum products, with new products released throughout the calendar year. We produce legal tender currency and certified gold products for countries, as well as extensive commemorative and branded products for retail companies. We work with wholesale and retail partners around the world.

BULLION

Aurum bullion products are specifically designed to be stacked or collected in bulk. Valaurum releases new bullion bill designs throughout the year and frequently restocks these Aurum to meet the high demand from collectors and investors.

The Aurum are printed on a single side with a unique reverse image.

UNIQUE REVERSE IMAGE

To create this reverse, each Aurum is made by precisely depositing gold, atom by atom, onto a printed polyester substrate. This process produces a unique effect on the reverse side of our single-sided Aurum.

In unprinted areas the gold holds a high sheen. However, where gold atoms have fallen on the printed artwork the gold acquires a matte finish for a lightly embossed effect.

This visual contrast can only be created using specialized deposition equipment and is a patented part of our production process.

LEGAL TENDER

Legal tender Aurum are issued by various governments and are double-sided bills manufactured using our patented Aurum technology. Each legal tender gold note contains 1/1000 oz of 24k gold protected by durable, printed polymer.

These notes are not only attractive and collectible items, but hold their own intrinsic value. Our legal tender releases are sold alone or with a printed, collectible folder. All legal tender bills are sold with a Certificate of Authenticity (COA).

COLLECTIBLE PACKAGING

Our legal tender program is available packaged in a clear protective sleeve or in a specially designed and printed commemorative folder. These folders are unique to each release and are both an attractive and protective way to store these bills.

COMMEMORATIVE & REPRODUCTION

Commemorative and reproduction Aurum showcase existing artwork, often historical currency or certificates. These classic bills create pieces that have an intrinsic value, are highly collectible, and have broad appeal.

GOLDBACKS®

Valaurum, Inc. is the manufacturer of Goldbacks®, the first local, voluntary currency to be made of spendable, physical gold. State releases include New Hampshire, Nevada, Utah, and Wyoming, with more releases planned this year. Each state release includes five denominations containing between 1/1000 - 1/20 gram of 24k gold and feature unique state-themed artwork.
